Custom SolarWinds IOC Investigation Playbook

Step 1: Data Collection
Import network proxy logs and SolarWinds IOC dataset into Splunk.

Step 2: IOC Extraction
Extract valid IP addresses from the SolarWinds IOC dataset and remove invalid entries.

Step 3: Log Correlation
Use Splunk to match IOC IPs with internal network logs to identify suspicious connections.

Step 4: Threat Validation
Search matched IPs in VirusTotal to confirm if they are malicious or suspicious.

Step 5: Impact Analysis
Identify affected systems and determine severity based on the number of matches and threat level.

Step 6: Containment
Block malicious IPs and isolate affected systems to prevent further communication.

Step 7: Investigation & Monitoring
Investigate affected systems and monitor for additional suspicious activity.

Step 8: Documentation
Record findings including IPs, systems, timestamps, and response actions.
